

Protecting the good guys

ABOUT US

Practical Infosec was founded by Ashley Woodhall. Ashley started the business after making himself a promise of building something himself. Something which had meaning.

He now finds this meaning through his work, helping purpose-led organisations and employed an ambitious Farzan Mirza in 2022 to do the same.

WHY US?

- No AI, no blockchain, no fear-selling. Just expert, human-led security solutions.
- Practical delivery with effective solutions
- Data driven approach, combatting the most prevalent issues
- Purpose-led, we care about our impact on people and the planet

THE TEAM

Ashley and Farzan both share the same vision: **Protecting the good guys.**

We offer organisation's peace of mind so they can carry on being awesome, without worrying about cyber incidents.

WHAT OUR CLIENTS THINK

The simplicity of the advice and guidance that we were given meant we could implement things very quickly.

Part of the reason that we work with Practical Infosec is that they are very clear on wanting to be a sustainable business, to work with sustainable businesses and to promote sustainability in general.

Richard Wain
Director @ Vu Online

The quality of the work has been great. There's been a lot of positive communication, working towards the right deliverables.

For others operating this SME space and the social impact space, your ability to design solutions for what we really need has been very useful.

Peter Huisman
Lead Venture Builder @ Persistent

PRICE LIST

What do we ask for in return?

Well, nothing at all is obligatory. We're just trying to help. We do have a few ways you can say thank you, if you'd like to;

- Leaving us a nice review on Google, or a testimonial we can use on our website
- Telling someone you think could benefit from our help about us.
- Passing on a good cause to someone else, everyone and every organisation has something that can be of value to others
- We're currently experimenting with an idea of asking organisations who receive our probono help, for their permission for us invite someone who's struggling to get into the security industry to follow the probono project. This way, each time we help an organisation for free, we can also help give real-life security experience to aspiring security professionals, especially those who are disadvantaged in some way or "left behind" by society.
